Application deadline
January 15

International Max Planck Research School for Organismal Biology
The International Max Planck Research School (IMPRS) for Organismal Biology

is a close cooperation between the Max Planck Institute for Ornithology in Seewiesen and in Radolfzell and the Department of Biology at the University of Konstanz. Its aim is to provide first class training and education for outstanding PhD students from all over the world. The faculty of the IMPRS for Organismal Biology is comprised of more than 25 leading scientists in the fields of animal behavior, ecology, evolution, physiology, and neurobiology.

Our competitive PhD program will provide an excellent starting platform for a successful career in Organismal Biology.

Besides their own research, the students attend laboratory courses offered by IMPRS faculty members as part of their training. Furthermore, workshops and seminars in relevant transferable skills like scientific writing, statistics, and time management are offered by the research school. Symposia with invited speakers, student retreats, and conference participation complete the individually tailored curriculum.

The official teaching language is English.
